

Defense Information Systems Agency (DISA)
Defense Enterprise Computing Center Columbus

Defense Enterprise Computing Center (DECC) Columbus is a fee-for-service organization of the DISA Computing Services Directorate (CSD) that provides world-class processing capability, systems management, communications, and data storage in a reliable, secure environment in support of Department of Defense services, agencies, and combatant commands. DECC Columbus is comprised of a Technical Support Division, Security Division, Voice & Circuits Division, and the Global Information Grid (GIG) Infrastructure Services Management Center (GISMC) Division. The DECC also provides administrative services to the following tenant DISA components: Chief Financial Executive (CFE) Accounting Compliance Division; CSD De-Militarized Zone Section; DISN Customer Contact Center; Defense Message System Network operations Center; DoD Network Information Center/SIPRNet Support Center

The Technical Support Division provides systems administration, storage management and server security services to over 400 operating environments, database administration, and web service support for multiple programs.

The Security Division manages intrusion detection sensors, provides first level forensics for other government agencies in response to security events, manages communication security items, manages change and configuration management items, and is responsible for facility management. Multiple levels of physical and information security access controls are in place to ensure a secure environment for DISA resources. DECC personnel maintain a minimum security clearance classification of Secret.

The Voice & Circuits Division provides oversight for DoD and customer-driven communications installations projects, provides day-to-day operations in the areas of voice/telecomm systems, provides voice bridge conferencing, Help Desk Management Reporting Services and automated morale call services to deployed service members.

The GISMC Division provides situational awareness reporting and service desk support for DISA enterprise services.

DECC Columbus' state-of-the-art operations facility was built in 1992 and consists of 92,614 square feet, including 71,740 square feet of 30" zinc-coated raised floor space.

The professional well-trained personnel, up-to-date facility, extensive levels of security and access control, and award-winning process improvements make DECC Columbus a premiere Information Technology (IT) support organization.
